# THE AUSTRALIAN NATURAL DISASTER RESILIENCE INDEX

A system for assessing the resilience of Australian  
communities to natural hazards

An Australian Government Initiative

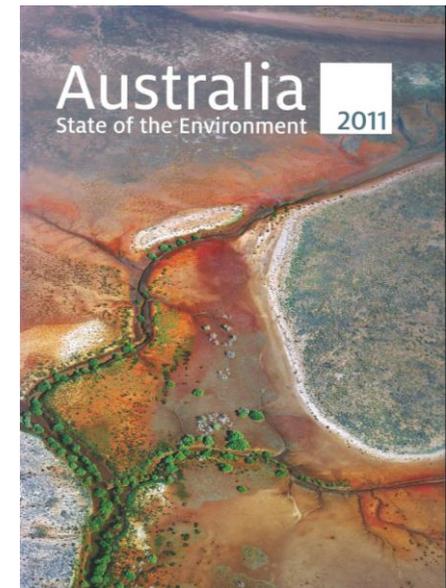

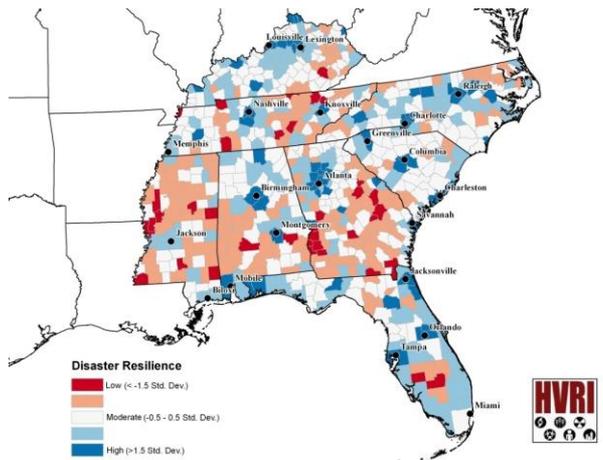

**UNE**  
University of  
New England

## Project aim:

To develop an index that measures the current state of disaster resilience in Australian communities – the Australian Natural Disaster Resilience Index

## Major output:

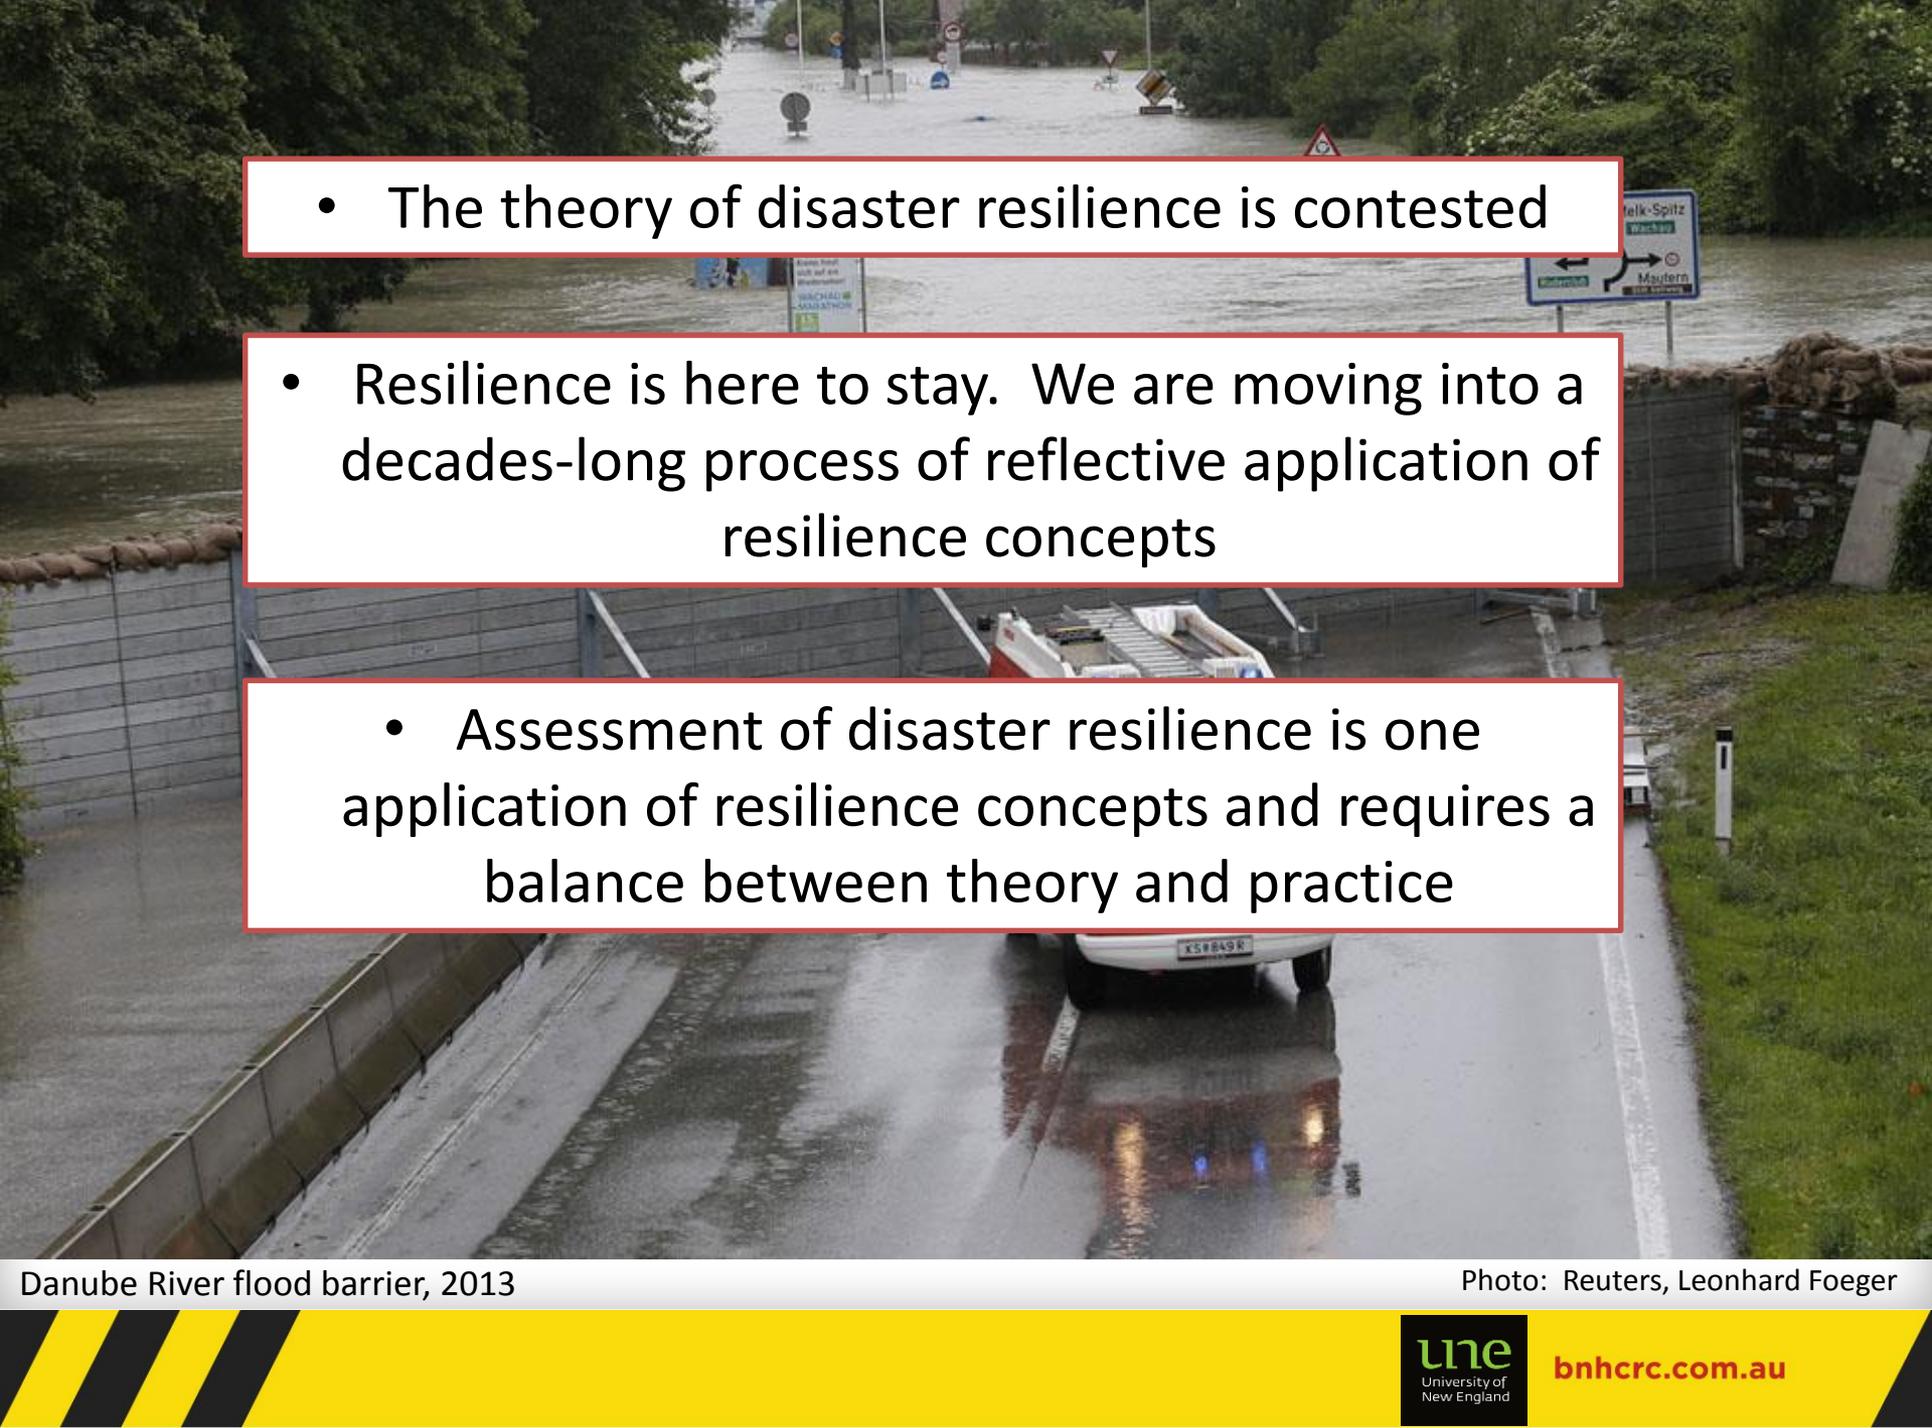

State of Disaster Resilience report

# TODAY'S TALK

- 1) How we are approaching the assessment of disaster resilience in this project
- 2) Indicators of disaster resilience
- 3) First outputs – social character indicators

- The theory of disaster resilience is contested

- Resilience is here to stay. We are moving into a decades-long process of reflective application of resilience concepts

- Assessment of disaster resilience is one application of resilience concepts and requires a balance between theory and practice

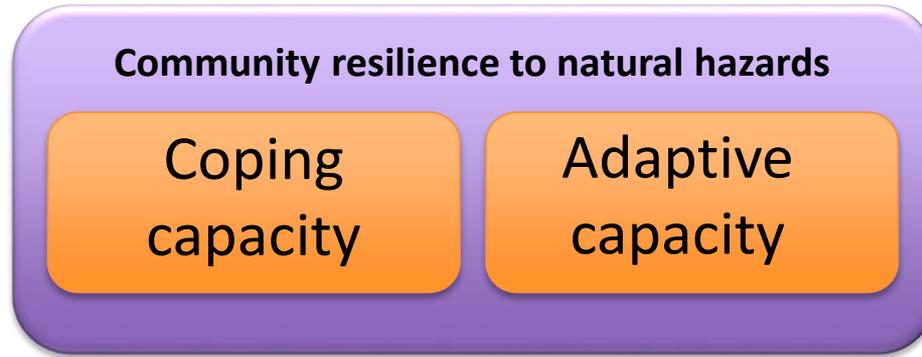

- Resilience is the capacity of a community to cope with disturbances or changes and to maintain adaptive behaviour.  
(Bureau of Rural Sciences, 2008)
- The resilience approach identifies the resources and adaptive capacity that a community can utilise to overcome the problems that may result from change.

# CONCEPTUAL MODEL FOR ASSESSING DISASTER RESILIENCE

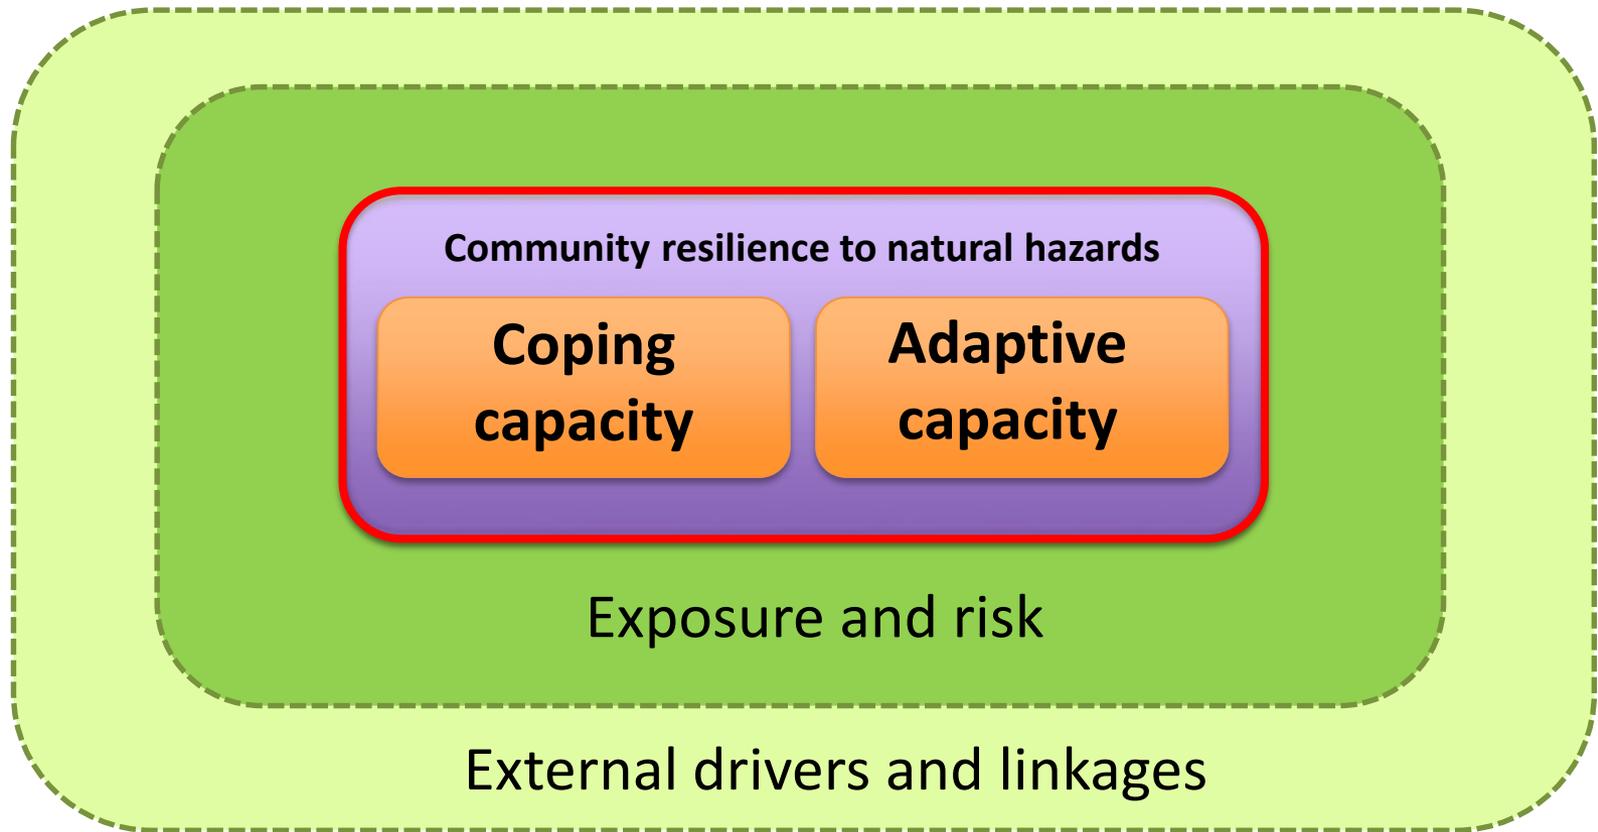

The means by which people or organizations use available resources and abilities to face adverse consequences that could lead to a disaster (UNISDR 2004)

Factors influencing the ability to prepare for, absorb and recover from a natural hazard event

The process of adjustment to actual or expected [climate and its] effects in order to moderate harm or exploit beneficial opportunities (IPCC 2012)

Mechanisms that enable adjustment through learning, adaptation and transformation

# CONCEPTUAL MODEL FOR ASSESSING DISASTER RESILIENCE

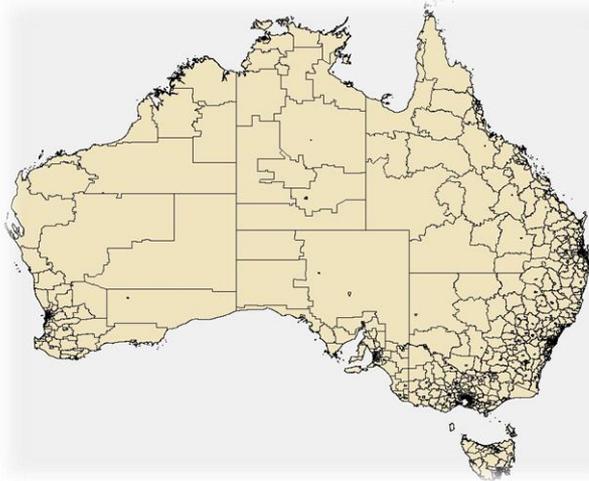

# CONCEPTUAL MODEL FOR ASSESSING DISASTER RESILIENCE

Community resilience to natural hazards

Coping  
capacity

Adaptive  
capacity

We are assessing the potential  
for resilience

Assessing resilience at a national scale  
means we need the same variables  
across the whole of Australia

- Existing large scale data sets
- Proxies for many capacities

# COPING CAPACITY

## Social capital

Social and demographic factors that influence ability to prepare for and recover from natural hazard events

Education, Age, Employment, Gender, Household structure, Migration & mobility, English language proficiency

## Economic capital

Infrastructure and planning

Emergency services

Community capital

Information and engagement

# COPING CAPACITY

Social capital

Economic capital

Economic factors that influence ability to prepare for and recover from natural hazard events

Income equity, Remoteness, Home ownership, Single sector employment dependence, Growth rate, Transport

Infrastructure and planning

Emergency services

Community capital

Information and engagement

# COPING CAPACITY

Social capital

Economic capital

Infrastructure and  
planning

Preparation for natural hazard  
events using strategies of  
mitigation or planning

Dwelling type, Building codes, Municipal  
service levels, Land use planning policy

Emergency services

Community capital

Information and  
engagement

# COPING CAPACITY

Social capital

Economic capital

Infrastructure and  
planning

Emergency services

The presence, capability and resourcing of emergency services, warning systems and disaster response plans

Access to health services, Emergency service size, structure and distribution, Emergency service volunteerism, Disaster response plans

Community capital

Information and  
engagement

# COPING CAPACITY

Social capital

Economic capital

Infrastructure and  
planning

Emergency services

Community capital

The cohesion and connectedness  
of the community

Information and  
engagement

Length of residence, Recreation and leisure opportunities, Crime, Access to social services, Sense of community, Volunteerism, Well-being

# COPING CAPACITY

Social capital

Economic capital

Infrastructure and  
planning

Emergency services

Community capital

Information and  
engagement

Availability of natural hazard  
information, community  
engagement and partnerships to  
encourage risk awareness

Risk awareness tools, Emergency service  
community engagement, Internet access

# ADAPTIVE CAPACITY

Governance, policy and leadership

Organizational enablers of adaptation

Community and social capital

Organizational structure, Review and learning processes, Mission and culture, Partnerships, Research and development

# ADAPTIVE CAPACITY

Governance, policy and leadership

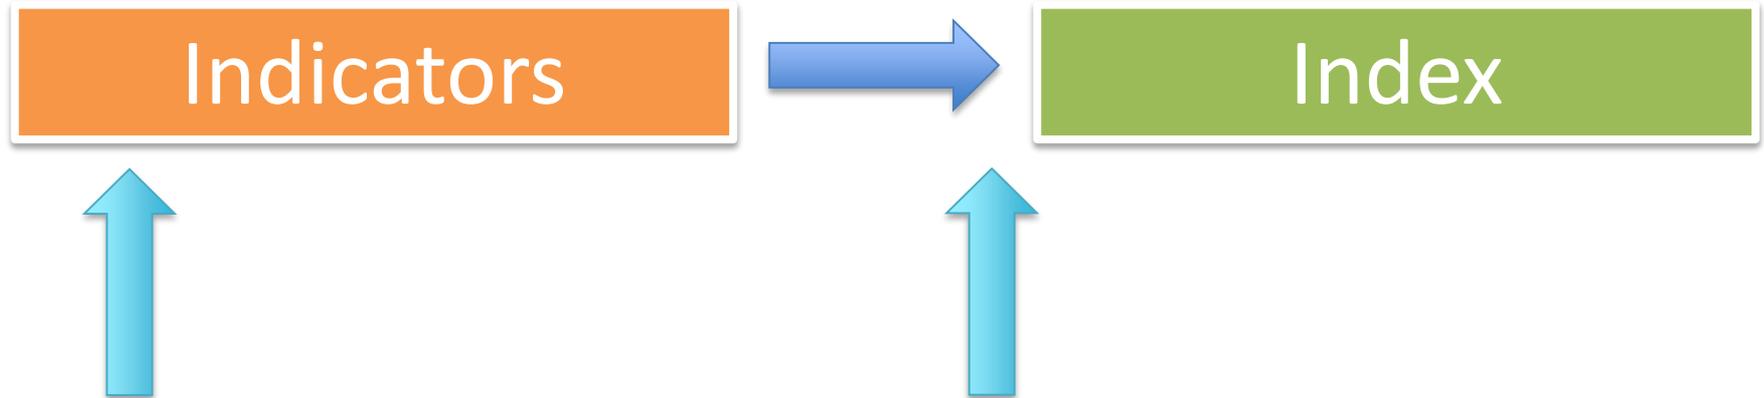

Community and social capital

Social enablers of adaptation

Opportunity for social learning, Civic engagement, Social groups, Social capital

- Mechanisms enabling organizational and social change
- Differs from coping capacity because the focus is on learning and transformation as the way that change happens

# INDEX CALCULATION

## Literature review

- Relationship between the indicator and disaster resilience – positive or negative
- Validation versus logic evidence

## Statistical analysis

- Index calculation
- Indicator weighting
- Correlations among indicators
- Sensitivity analysis

# COPING CAPACITY

Social capital

Education, Age, Income, Employment, Gender, Household structure, Migration, English language proficiency

Economic capital

Infrastructure and  
planning

Emergency services

Community capital

Information and  
engagement

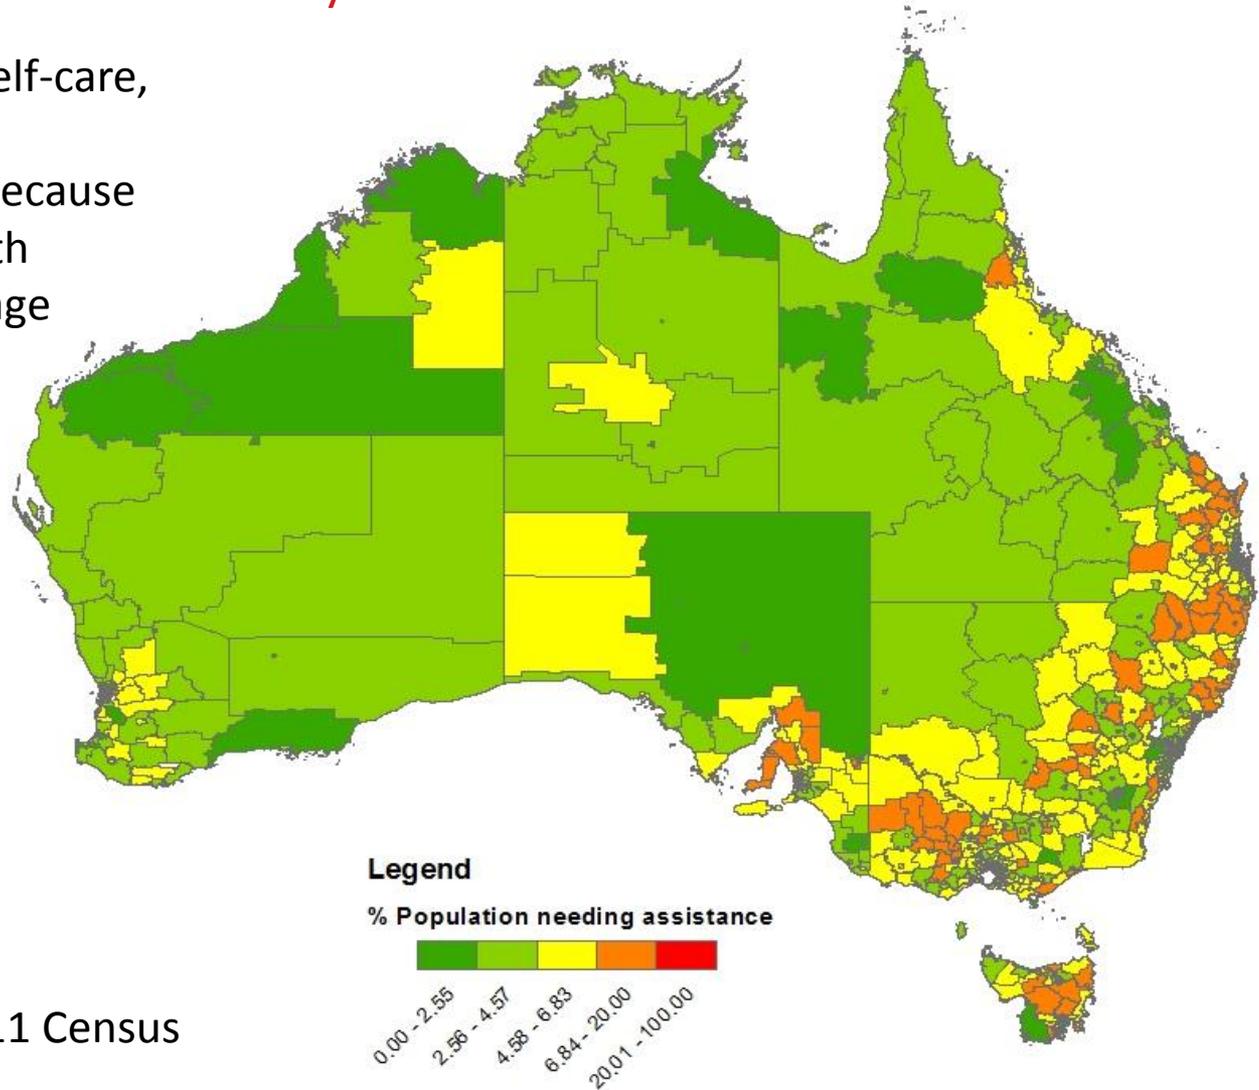

# NEED FOR ASSISTANCE

## % Population with a core activity need for assistance

Need help with self-care, mobility and communication because of disability, health condition or old age

Negative relationship to resilience – greater assistance = less coping capacity

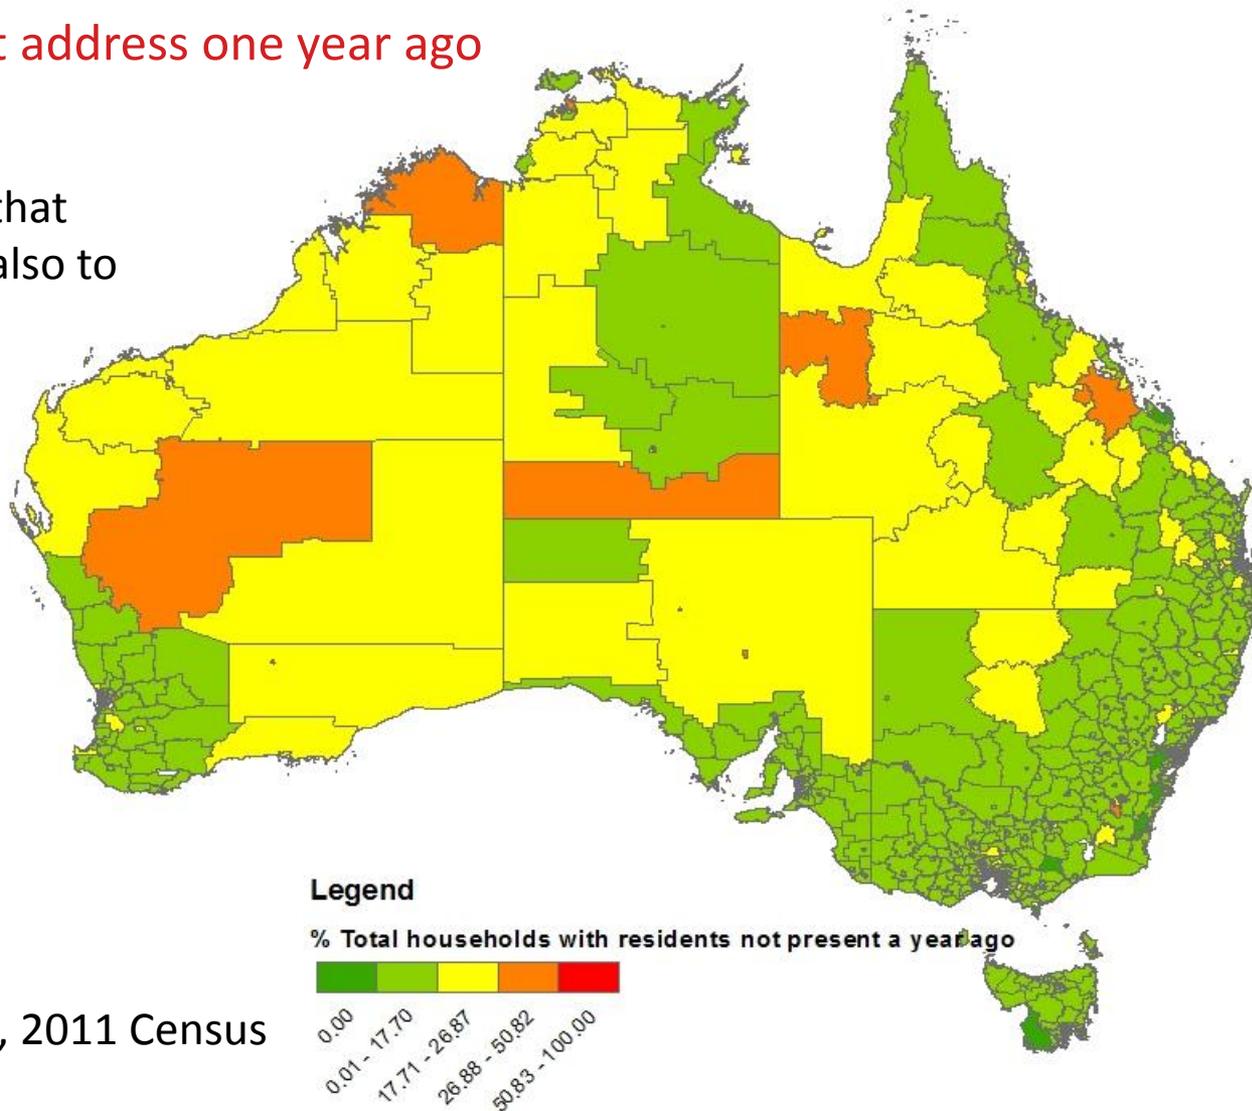

SA2 level data, 2011 Census  
ASSNP

# MIGRATION

% Households with one or more residents having a different address one year ago

Internal mobility  
Residents new to that address (possibly also to the area)

Negative relationship to resilience – less familiarity with an area = lower coping capacity

# MIGRATION

% Households with one or more residents having a different address one year ago

## Legend

% Total households with residents not present a year ago

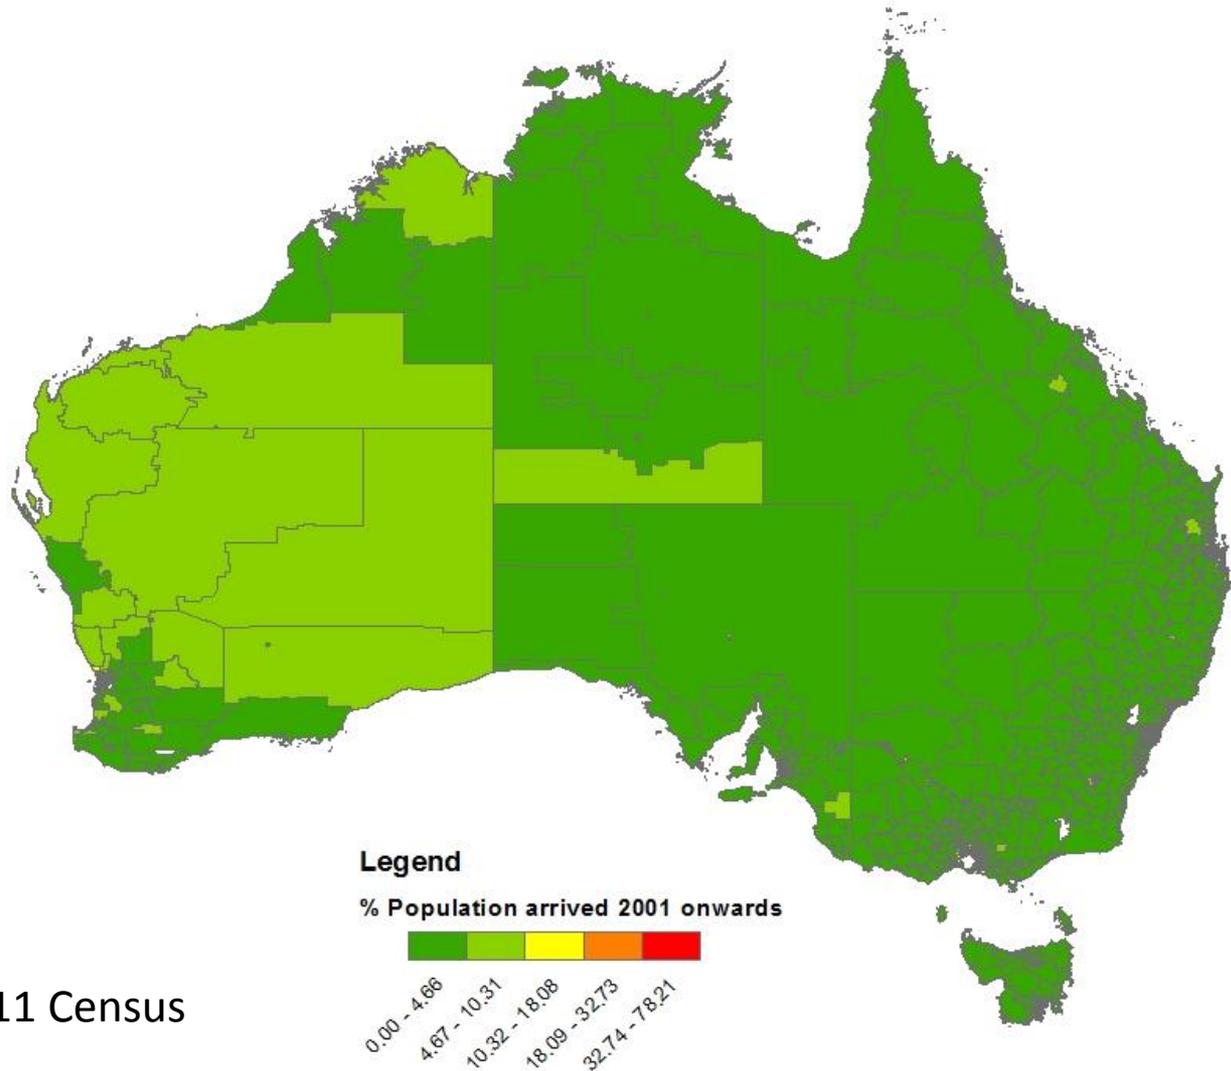

# MIGRATION

## % Population arrived in Australia after 2001

Residents new to  
Australia

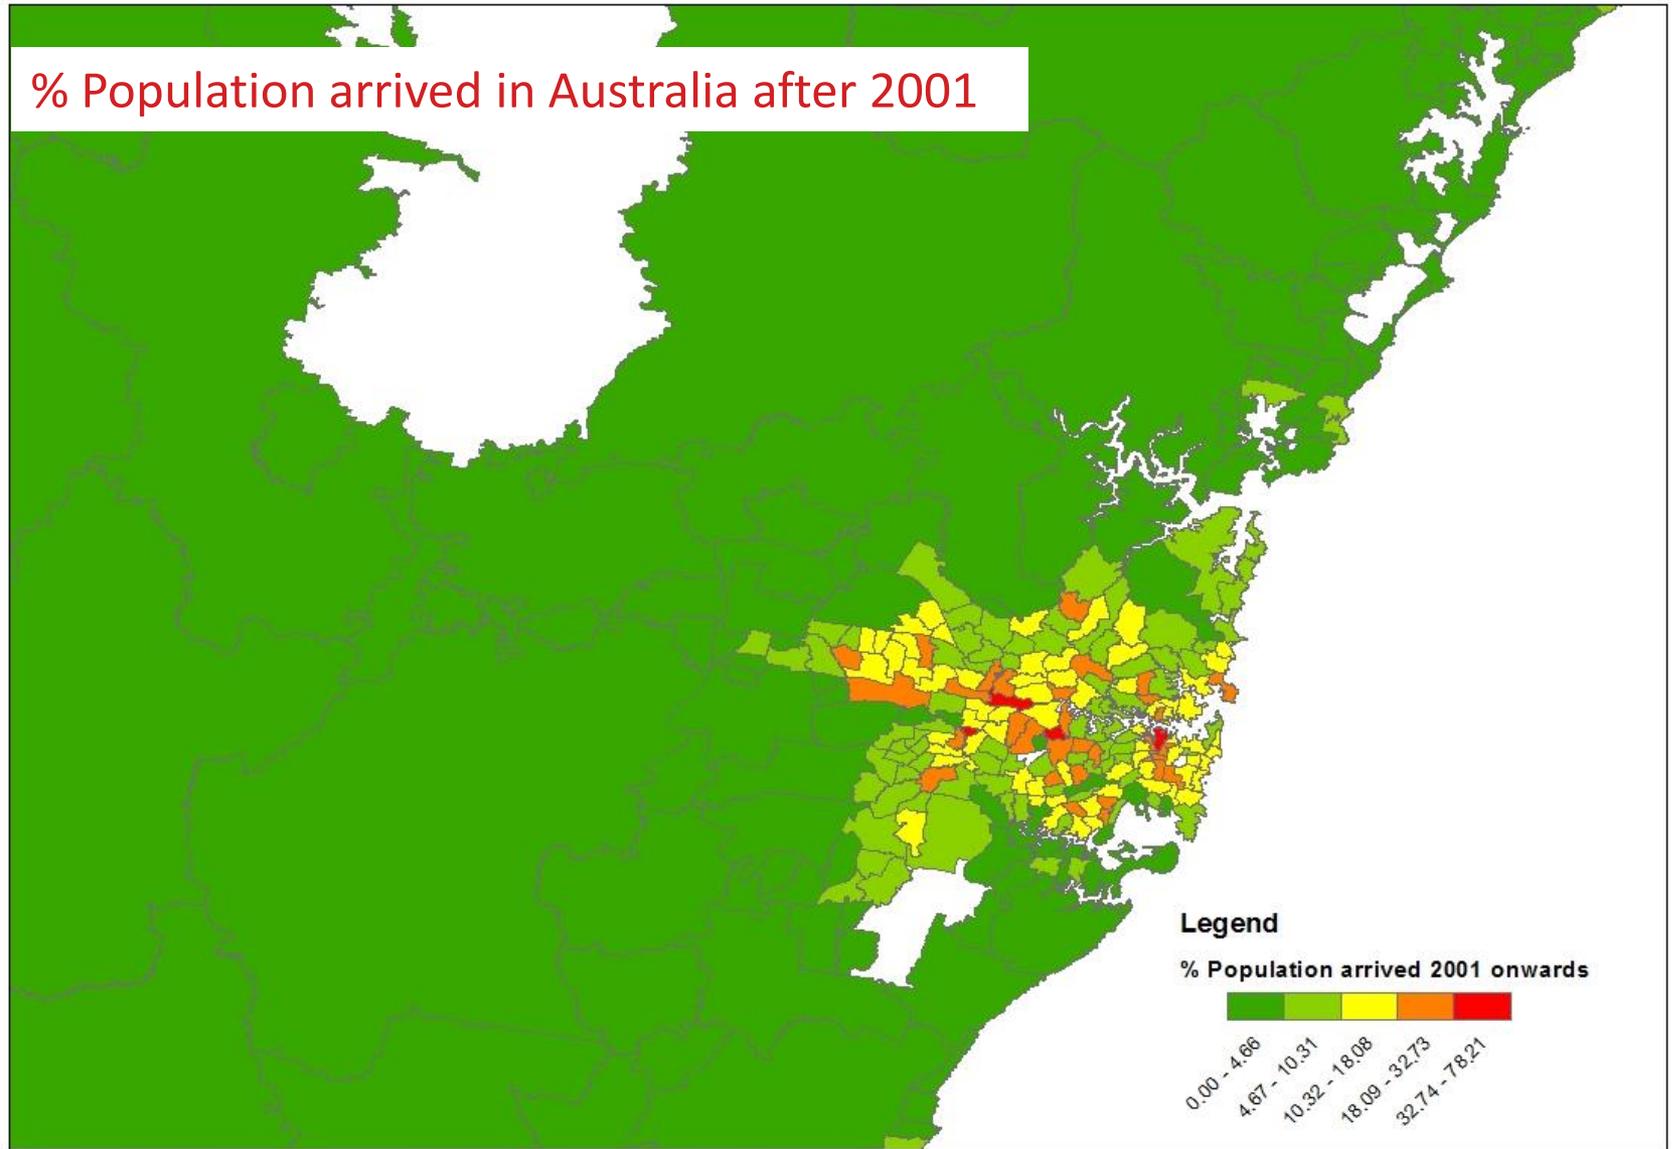

Negative  
relationship to  
resilience – less  
familiarity with  
Australian  
hazards and  
systems = lower  
coping capacity

SA2 level data, 2011 Census  
YARRP

# MIGRATION

% Population arrived in Australia after 2001

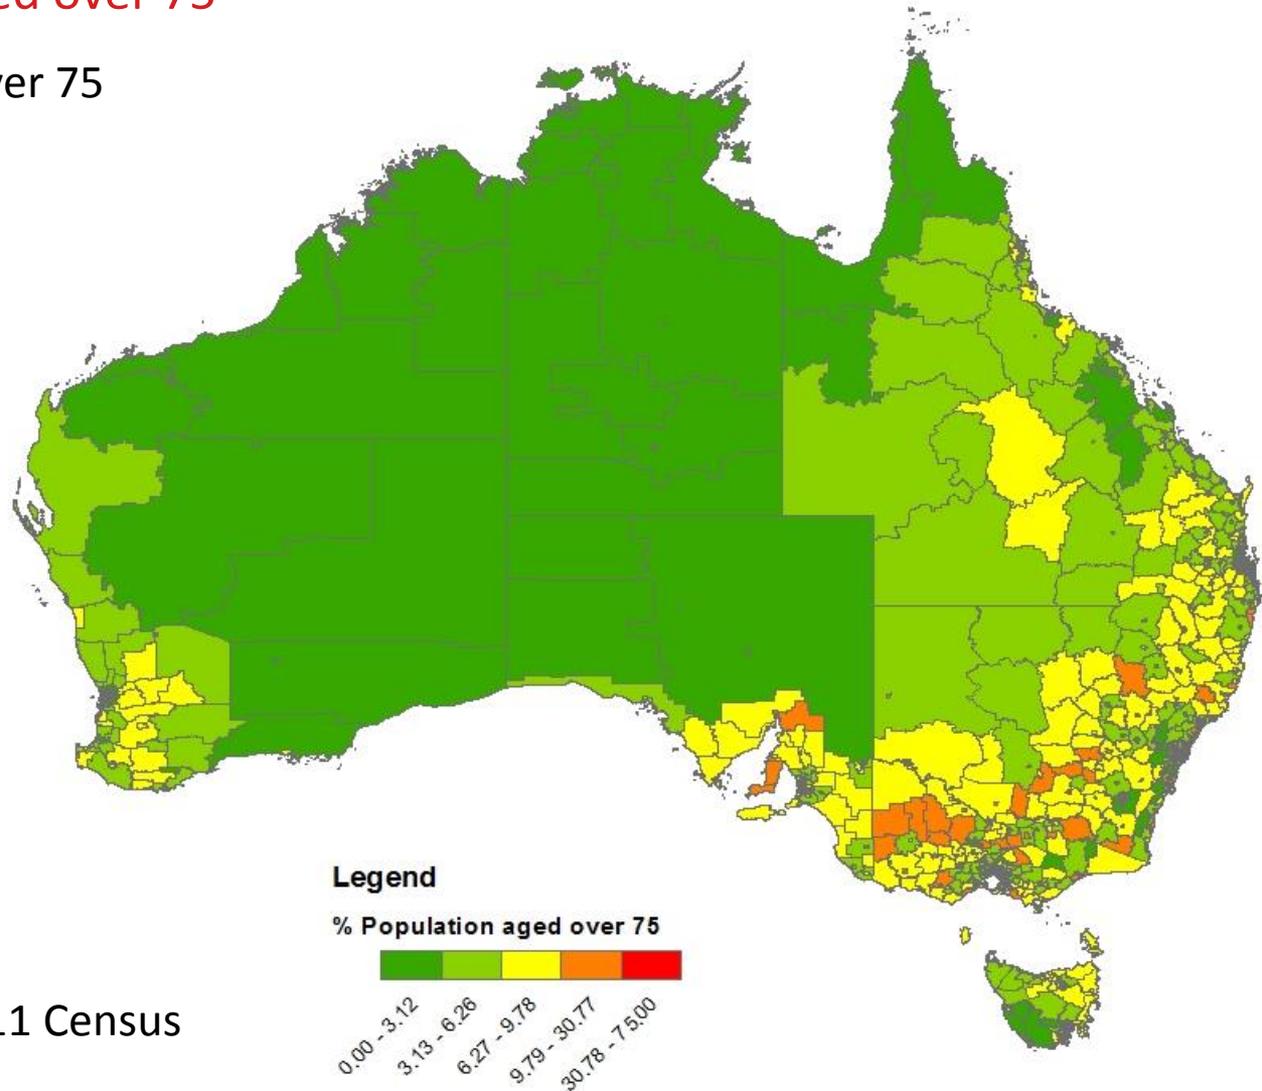

# AGE

## % Population aged over 75

Residents aged over 75

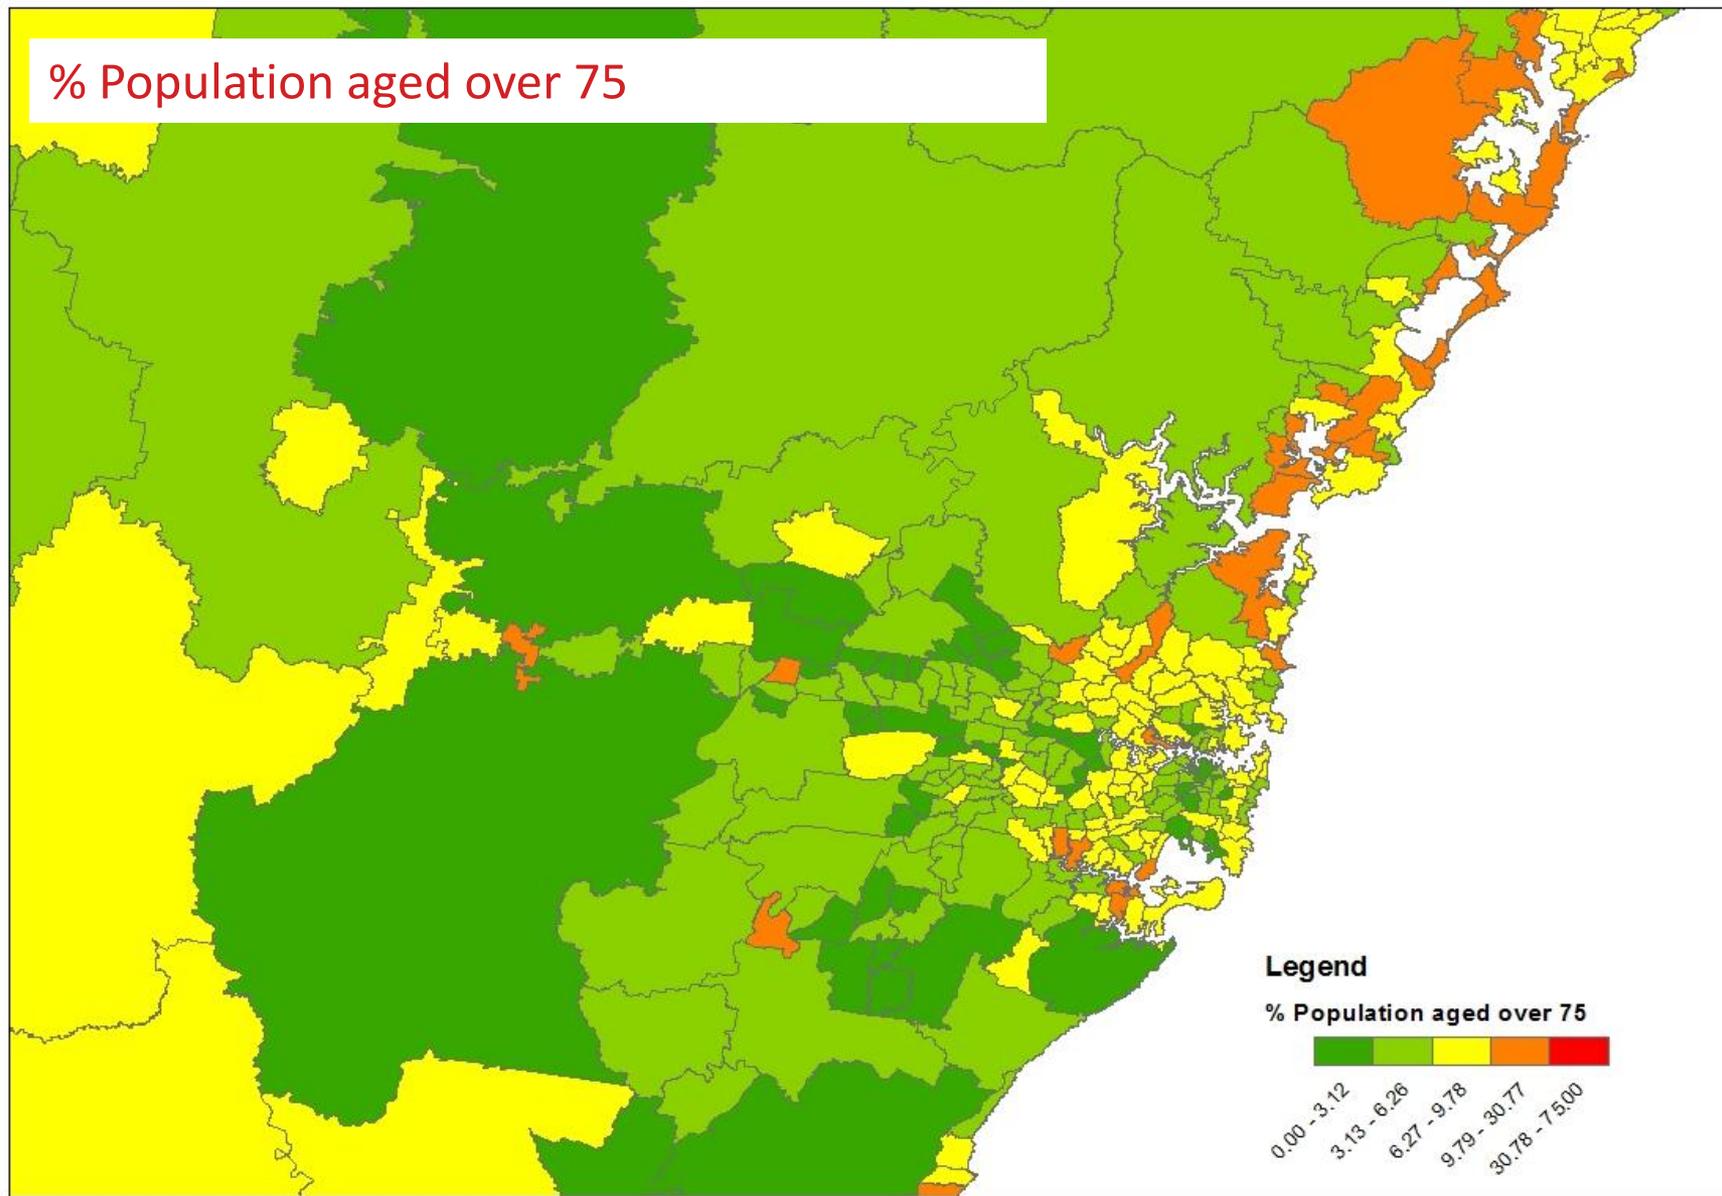

Negative relationship to resilience – being older = lower coping capacity

SA2 level data, 2011 Census  
AGEP

# AGE

% Population aged over 75

Legend

% Population aged over 75

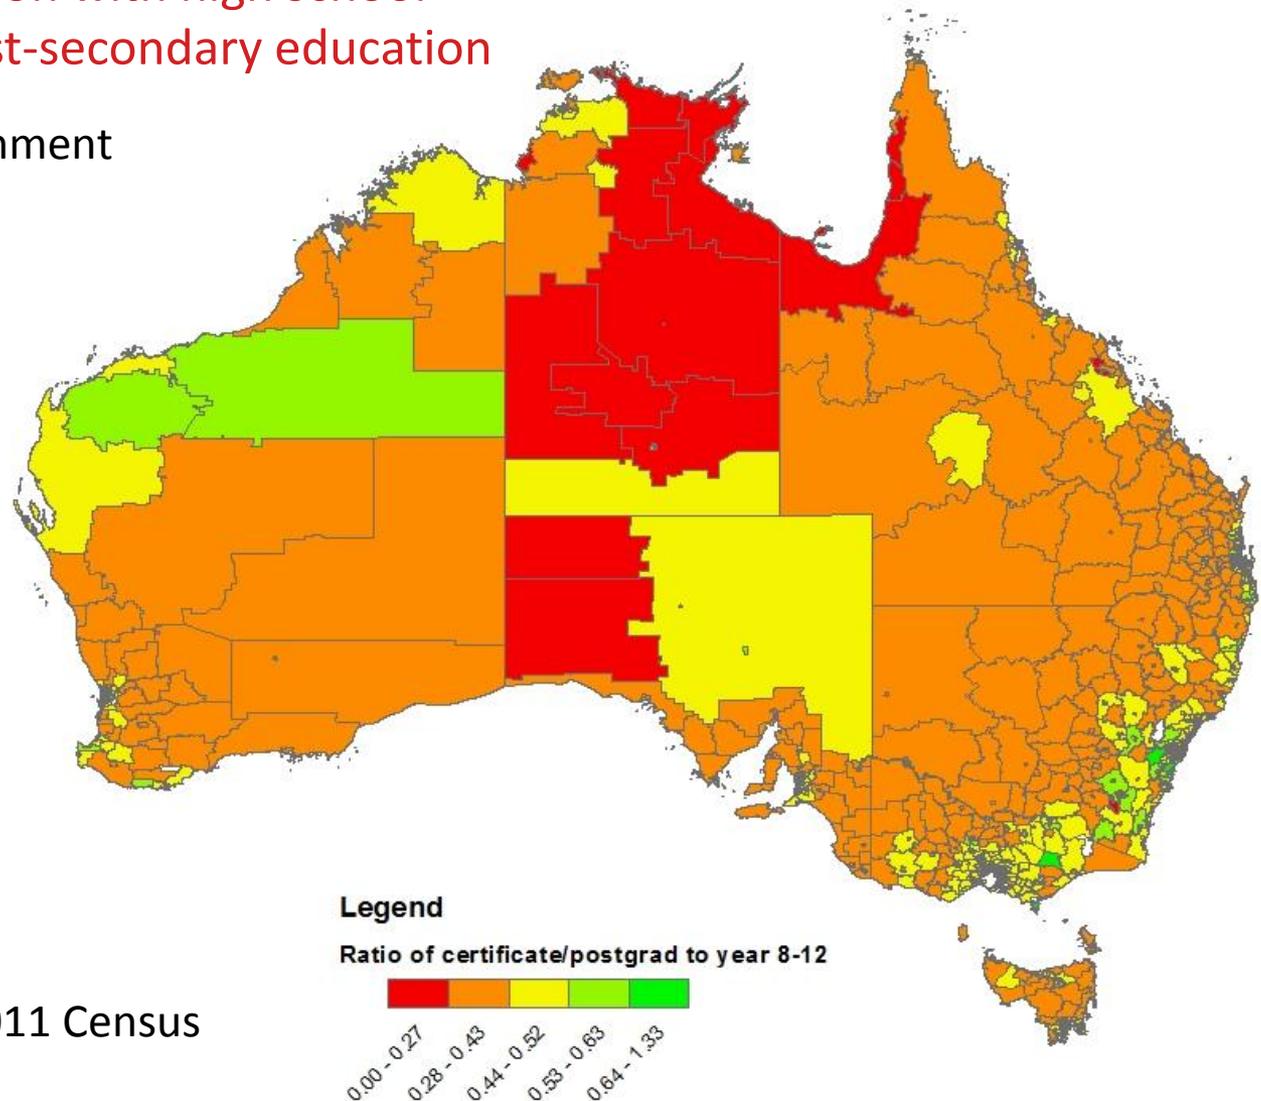

0.00 - 3.12  
3.13 - 6.26  
6.27 - 9.78  
9.79 - 30.77  
30.78 - 75.00

# EDUCATION

Ratio of population with high school education to post-secondary education

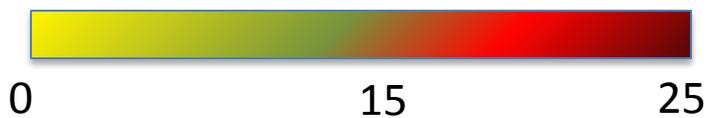

Educational attainment

? Negative relationship to resilience – less education = lower coping capacity

# EXAMPLE INDEX OF SOCIAL CAPITAL

	Total score	% population with need for assistance	% households not resident 1 year ago	% migrants arriving since 2001	% Population aged >75	Educational attainment ratio
Surry Hills	15	2	5	5	2	1
Cabramatta/ Lansvale	19	4	2	5	3	5
Armidale	16	3	4	3	3	3
Ulladulla	15	3	2	1	5	4

0

15

25

Higher resilience

Lower resilience

Categories based on percentiles (<25, 25-50, 50-75, 75-90, >90)  
Categorized into a corresponding scale of 1 to 5, where 1= low and 5 = high

# Disaster Resilience

## COPING CAPACITY

Social character

Economic capital

Infrastructure and  
planning

Emergency services

Community capital

Information and  
engagement

## ADAPTIVE CAPACITY

Governance, policy and  
leadership

Community and  
social capital

# PEOPLE

# HOUSEHOLD STRUCTURE

% Households with children

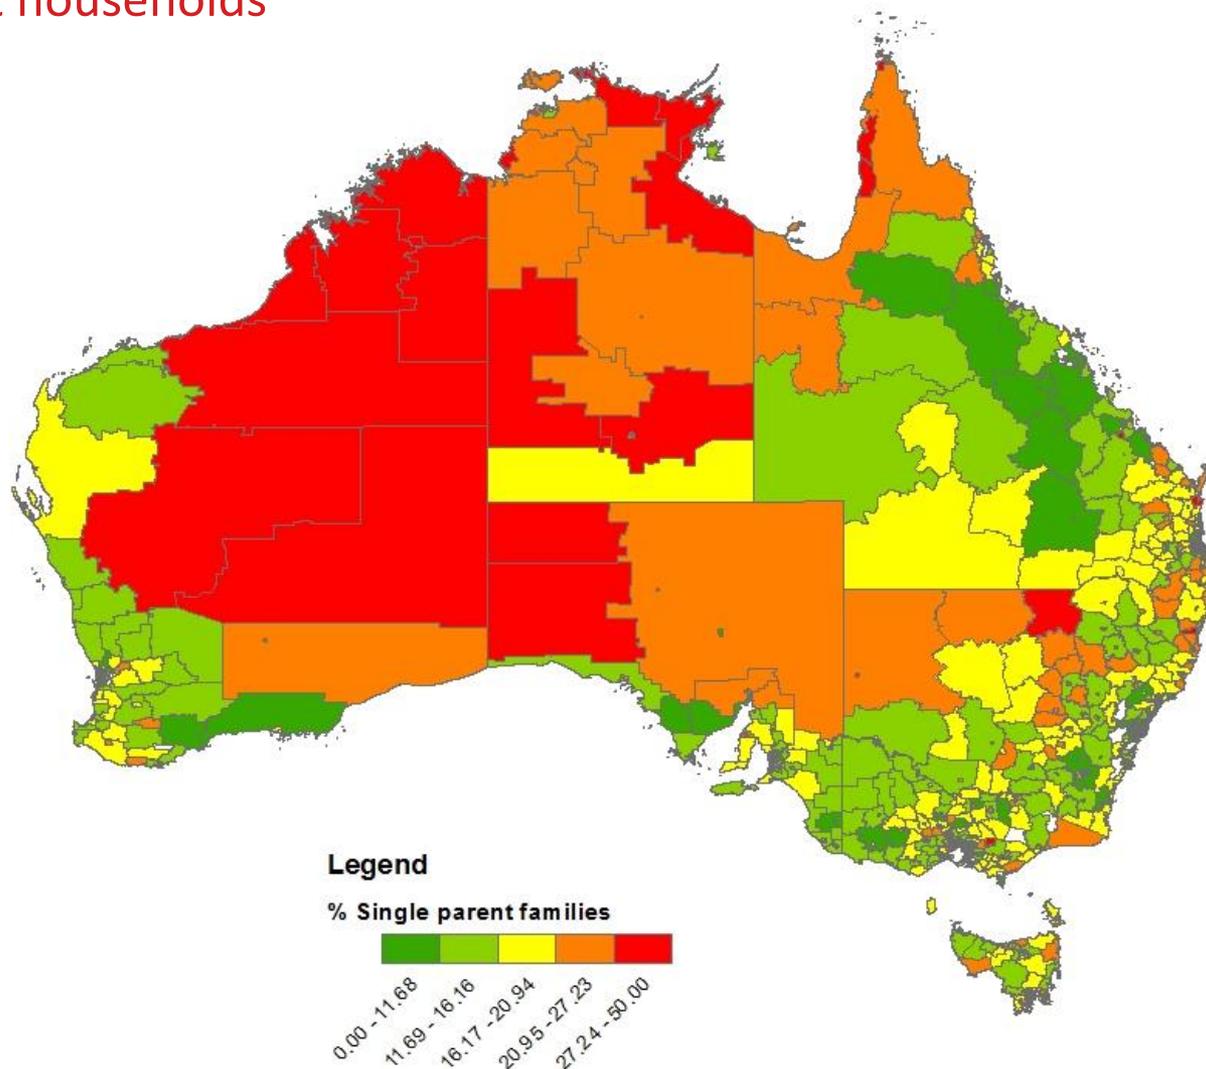

# HOUSEHOLD STRUCTURE

% Lone person households

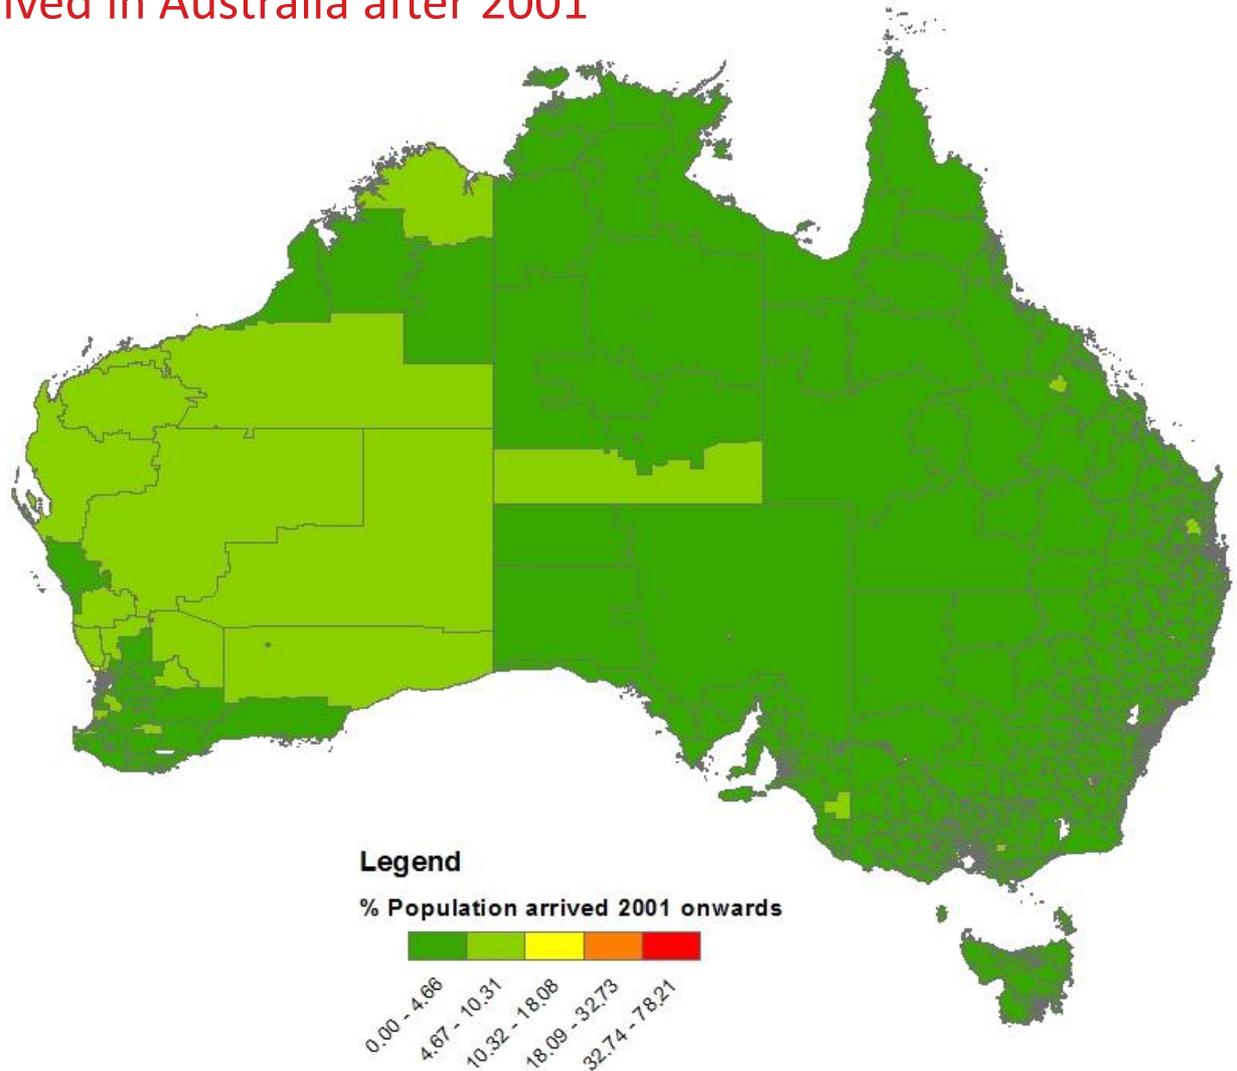

# HOUSEHOLD STRUCTURE

% Single parent households

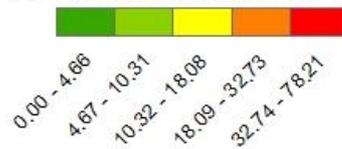

# MIGRATION

% Population arrived in Australia after 2001

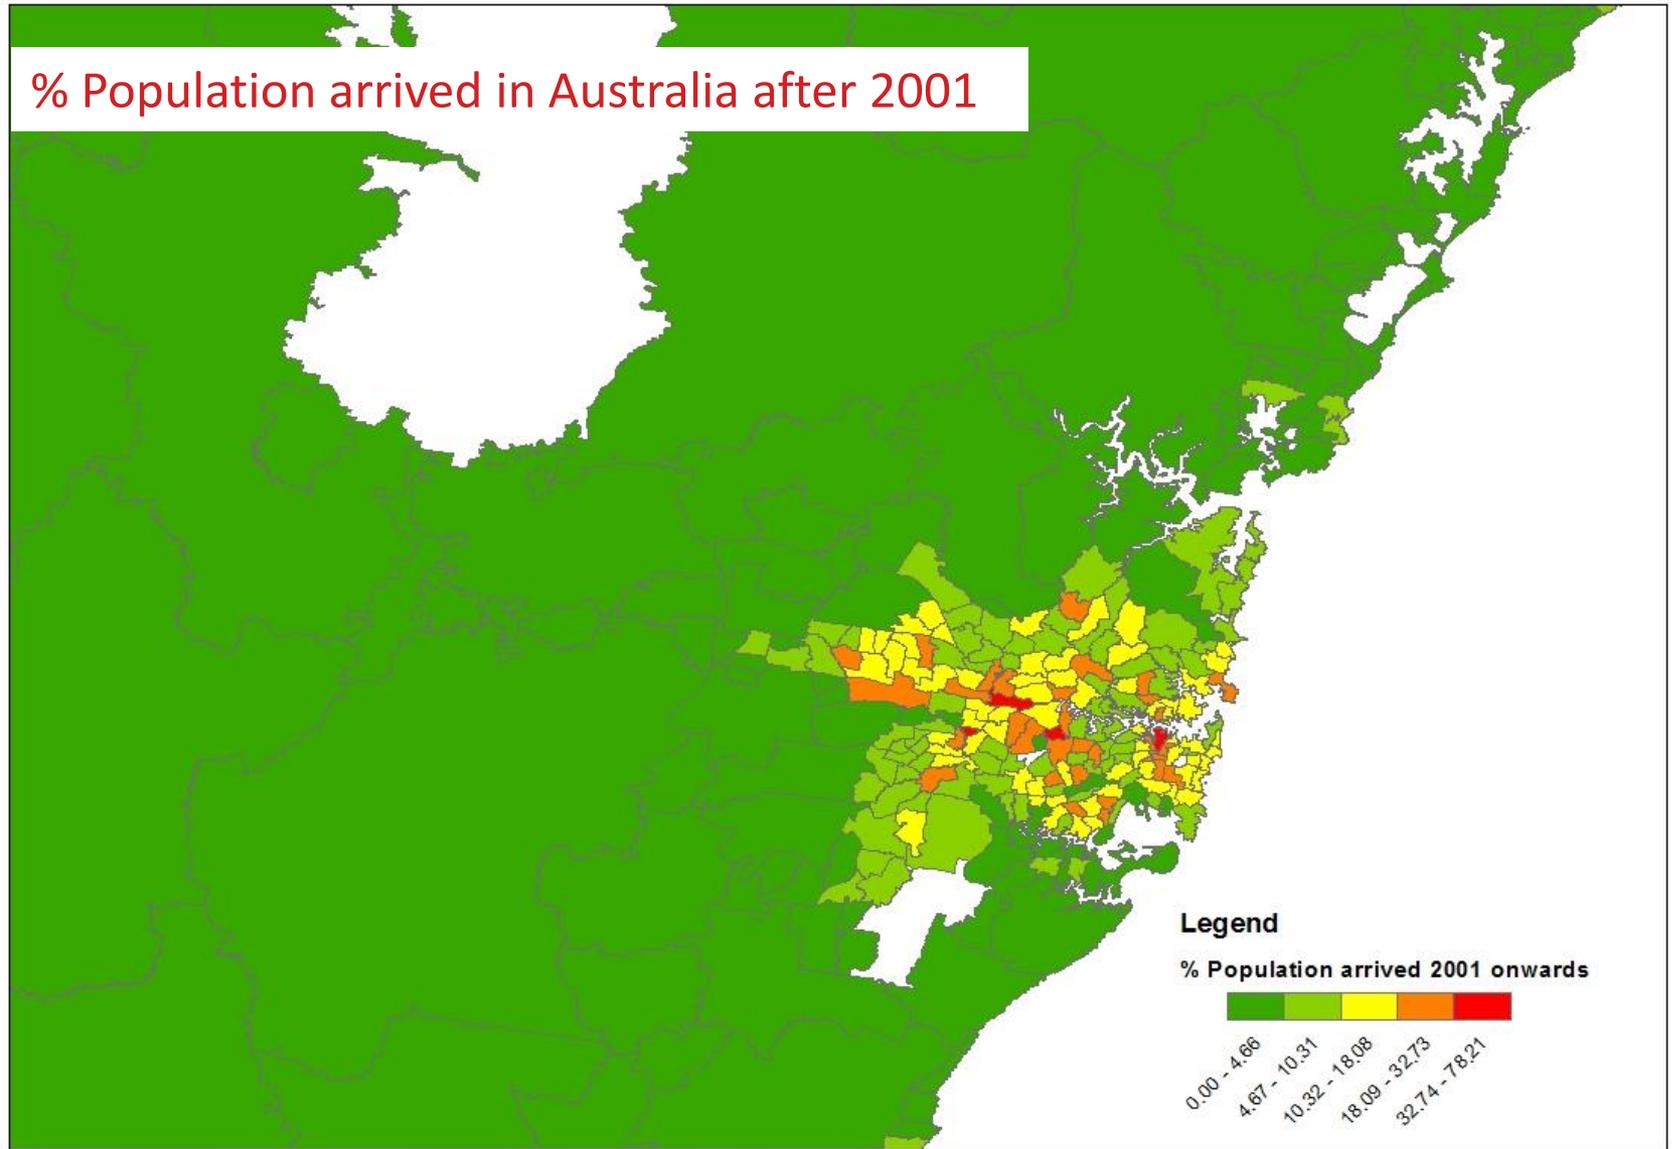

**Legend**

% Population arrived 2001 onwards

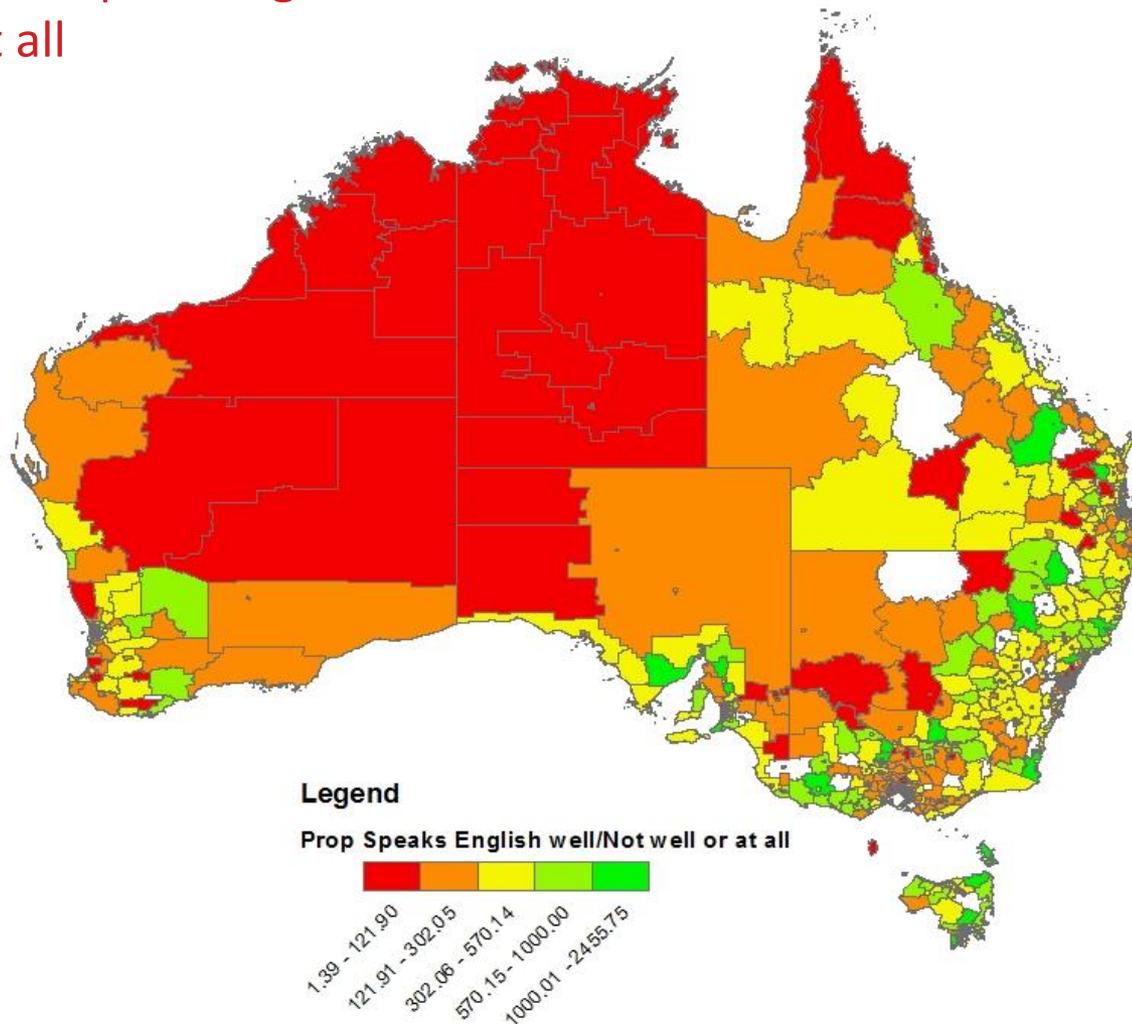

# MIGRATION

% Population arrived in Australia after 2001

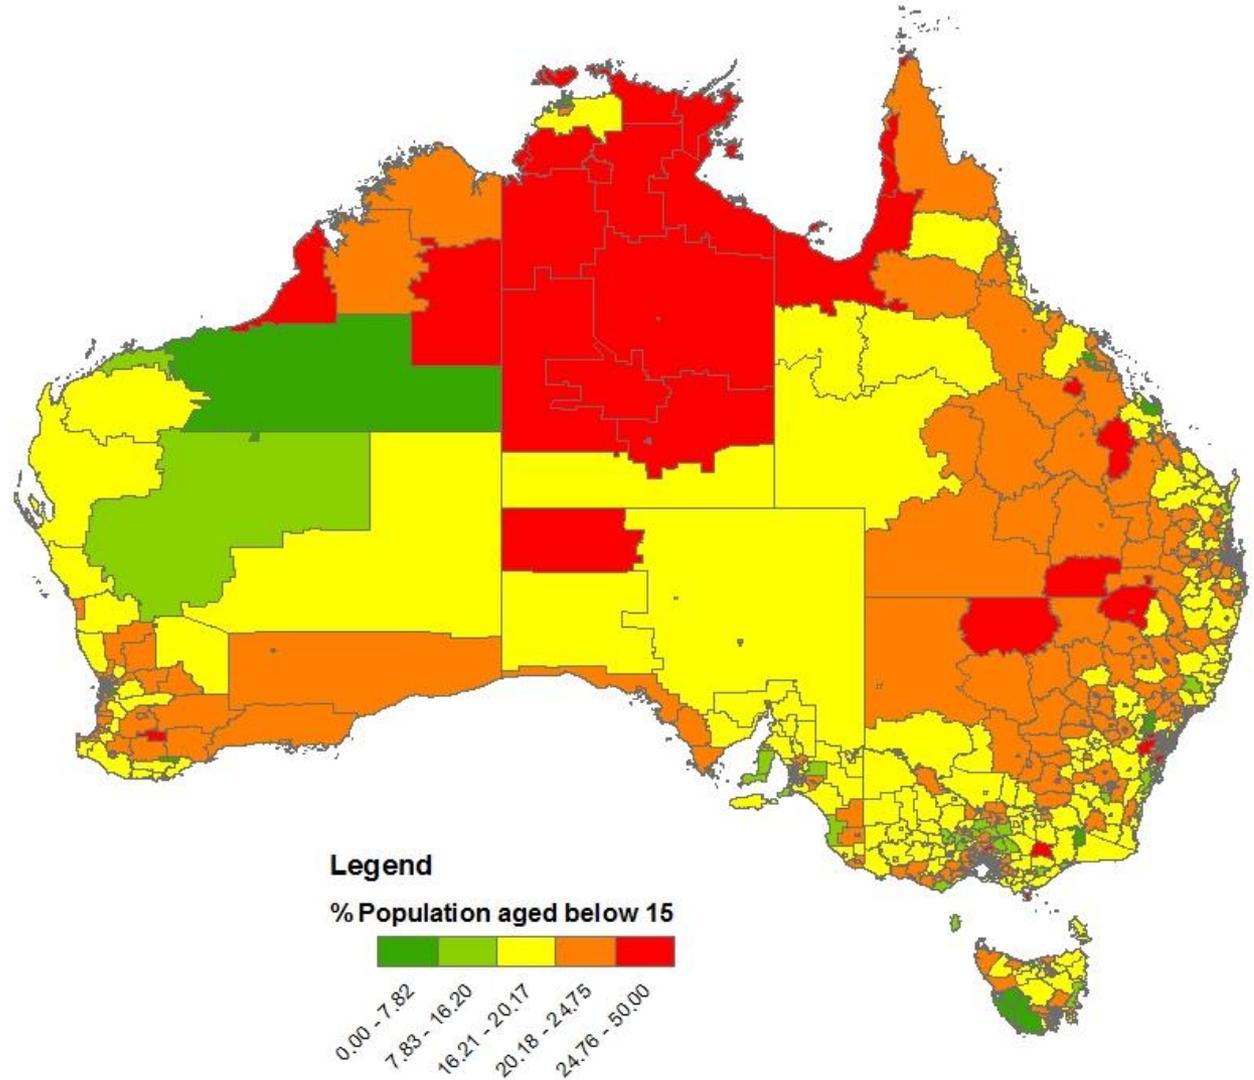

# ENGLISH LANGUAGE PROFICIENCY

Ratio of people who speak English well to not well or not at all

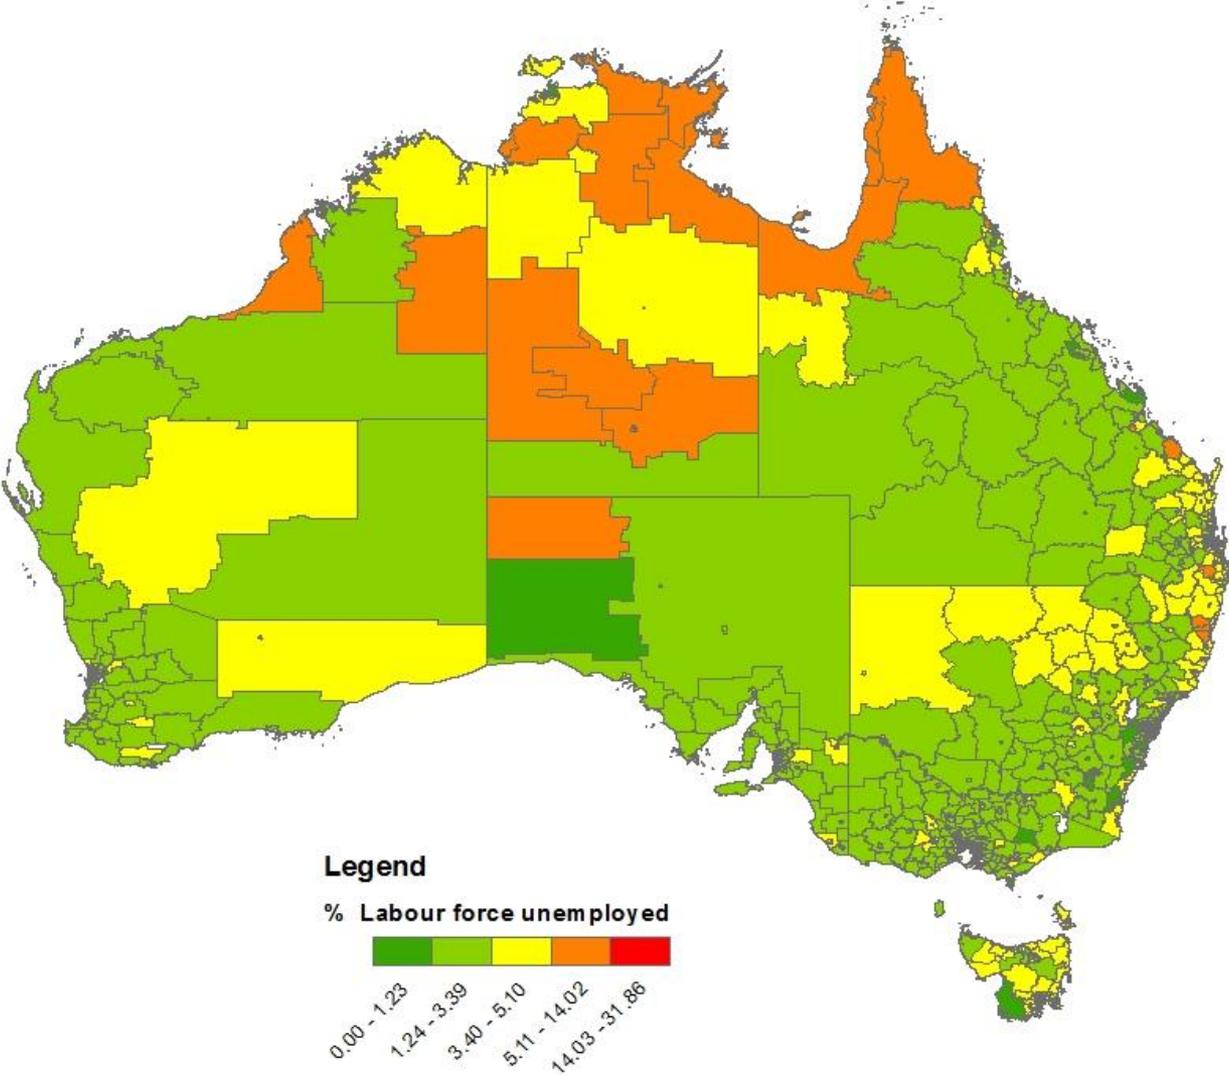

# AGE

% Population aged below 15

# EMPLOYMENT

% Labour force unemployed

# EMPLOYMENT

% Population not in labour force
